Learning goals

Online version

Learning goals for the Doctoral Programme in Biosciences and Drug Research

During the doctoral degree, researchers should learn to:

- Develop a deep understanding of their field, including its central theories, concepts, methods, and relevance to society.
- Plan and carry out independent research that produces new knowledge, develops methods or concepts, or contributes to practical applications.
- Build practical research skills in problem-solving, project and time management, scientific writing, visual communication, networking, teaching, supervision, and leadership.
- Prepare for work in academia, industry, the public sector, and other research-related professions, while developing the ability to keep learning throughout their career.

A doctorate can lead to many kinds of work. Graduates may continue in academic research, move into biotechnology or pharmaceutical companies, work in government or research administration, manage intellectual property, teach, publish, communicate science, or build new ventures. The degree should prepare researchers to use their scientific training in more than one setting.

Lärandemål för doktorandprogrammet i biovetenskap och läkemedelsforskning

Under doktorsexamen ska forskaren lära sig att:

- Utveckla en djup förståelse för sitt forskningsområde, inklusive centrala teorier, begrepp, metoder och områdets samhälleliga relevans.
- Planera och genomföra självständig forskning som ger ny kunskap, utvecklar metoder eller begrepp eller bidrar till praktiska tillämpningar.
- Utveckla praktiska forskningsfärdigheter inom problemlösning, projekt- och tidshantering, vetenskapligt skrivande, visuell kommunikation, nätverkande, undervisning, handledning och ledarskap.
- Förbereda sig för arbete inom akademien, näringslivet, den offentliga sektorn och andra forskningsrelaterade yrken, samt utveckla förmågan till kontinuerligt lärande.

En doktorsexamen kan leda till många olika typer av arbete. Utexaminerade kan fortsätta inom akademisk forskning, arbeta inom bioteknik eller läkemedelsindustrin, gå vidare till myndigheter eller forskningsadministration, arbeta med immateriella rättigheter, undervisning eller vetenskaplig publicering och kommunikation, eller starta nya verksamheter. Utbildningen ska ge forskaren möjlighet att använda sin vetenskapliga kompetens i flera olika sammanhang.

Curriculum

Online version

The doctoral degree includes **30 ECTS** of studies. Most credits normally come from the major subject or a closely related field.

Major subject or related fields: 20–30 ECTS

Compulsory courses

- A course on research ethics
- Subject-specific compulsory courses

Courses that support the PhD project

Relevant options include advanced courses in the major subject or related fields and methodological training such as statistics, experimental design, or bioinformatics.

Conferences: maximum 5 ECTS

Five ECTS requires active participation, including the doctoral researcher's own contribution, in at least two international conferences.

General skills or minor subject: 0–10 ECTS

Examples include:

- University pedagogy
- Language courses, up to **5 ECTS**

Studying at other universities

Studies can also be completed at other universities. Through the **Doctoral+ (Tohtori+)** network, doctoral courses at other Finnish universities are free of charge; add the course to your study plan in Peppi.

A separate agreement also covers University of Turku courses outside the Doctoral+ network. See [Doctoral studies at ÅAU](#) for current information.

Licentiate degree

A licentiate degree consists of 30 ECTS of studies and a licentiate thesis. A doctoral degree completed after a licentiate degree requires the doctoral dissertation. See the [programme page](#) for details.

Useful resource

-  [Skills and Competencies \(DOCX\)](#)

Yearly follow-up during your PhD studies

The yearly follow-up is a chance to review progress, update the study and research plans, and discuss supervision openly. The process combines the Individual Study Plan (ISP) with a Thesis Follow-Up Committee (TFC).

At the start of the PhD

After admission, update the ISP within the first three months using the plan submitted with the doctoral-study application.

Every doctoral researcher has at least two supervisors. One is the responsible supervisor and must be a docent or have equivalent qualifications. See section 4.4 of the [Regulation on Doctoral Studies](#).

During the same period:

- update the ISP;
- recruit two TFC members together with the supervisor(s); and
- arrange the first TFC meeting.

The yearly cycle

The ISP must be updated once a year, normally at the end of the autumn semester unless the doctoral programme decides otherwise. The responsible supervisor also holds a follow-up and development meeting with the doctoral researcher at least once a year. See section 4.3 of the [Regulation on Doctoral Studies](#).

The TFC meets every year until the thesis defence. The doctoral researcher organises the meetings.

The recommended committee has two members, internal or external to Åbo Akademi University, in addition to the supervisor(s). Its role is to provide scientific and practical advice and to help identify problems early. The study plan or research plan can be updated after the discussion.

If a problem with the research or supervision arises between meetings, the doctoral researcher can contact the TFC members or the ombudsperson. The researcher must have an opportunity to speak with the TFC in confidence.

Before each TFC meeting

At least one week before the meeting:

- update the ISP, including the research plan;
- send the updated ISP to the TFC and supervisors; and
- circulate the agenda and any other material.

During the meeting

Allow up to **90 minutes**.

1. Researcher presentation and discussion — up to 60 minutes.

Cover the doctoral training plan and the main points needed to judge progress toward graduation:

- completed and planned courses;
- scientific progress;
- publication plan;
- funding plan; and
- expected graduation date.

2. Committee feedback. Discuss the graduation plan, research plan, and presentation.

3. Confidential discussion with the supervisor(s) — 10–15 minutes.

The doctoral researcher leaves the room so the committee and supervisor(s) can discuss any concerns.

4. Confidential discussion with the doctoral researcher — final 10 minutes.

The supervisor(s) leave so the doctoral researcher can raise supervision-related questions or concerns directly with the committee.

After the meeting

Within one week, write short minutes, share them with the participants, make any final changes to the ISP, and submit the updated ISP to the graduate school.

Quick checklist

First three months

- ☐ Update the ISP
- ☐ Recruit two TFC members with the supervisor(s)
- ☐ Arrange the first TFC meeting

Before each yearly meeting

- ☐ Update the ISP and research plan
- ☐ Send them to the TFC and supervisor(s) at least one week in advance
- ☐ Circulate the agenda and supporting material

During each meeting

- ☐ Review graduation requirements and target date
- ☐ Review courses and scientific progress
- ☐ Review the publication plan
- ☐ Review the funding plan
- ☐ Hold the confidential discussion without the doctoral researcher
- ☐ Hold the confidential discussion without the supervisor(s)

Useful resource

- [Skills and Competencies \(DOCX\)](#)

Graduation requirements

Online version

Duration and credits

A PhD thesis typically takes **3–4 years** to complete.

The degree requires **30 ECTS** of studies. See the [Curriculum](#).

Article-based dissertations: university rules

Under the current Åbo Akademi University regulations, an article-based doctoral dissertation typically consists of **2–3 scientific articles**. A licentiate dissertation must include **at least one article**. Doctoral programmes may also provide programme-specific guidance.

The following can count as scientific articles:

- published articles;
- articles accepted for publication;
- unpublished manuscripts that have undergone peer review or been accepted for publication; and
- unpublished manuscripts submitted for peer review.

The articles form the main scientific contribution of the dissertation. The appropriate number depends on their scope, scientific significance and quality, the publication platform, and the doctoral researcher's individual contribution to co-authored work.

At least **one article must be accepted for publication**. In exceptional cases, the Head of Department may approve submission with fewer articles than normally recommended if the scope and quality are sufficient.

Preliminary examiners will pay particular attention to manuscripts that have not yet been accepted for publication.

Programme recommendations

The programme recommends judging a thesis by the quality and contribution of the work rather than by article count alone.

- A typical thesis contains **two high-quality papers**, with the doctoral researcher as **first author on at least one**.
- At least **50% of the included work** should be published or accepted.
- The supervisor and head of subject decide when the thesis is ready for preliminary examination.
- The head of department grants permission for the public defence on the basis of the preliminary examiners' statements.
- For every manuscript included in the thesis, the doctoral researcher's contribution should be described precisely. List concrete contributions such as data generation, analysis, writing, and relevant figure panels rather than using broad statements. Use the programme template signed by the supervisor.

Areas of Expertise

- The role of glycolipid transfer proteins in cells
- Glycosphingolipid biosynthesis
- Intracellular glycosphingolipid transport events

Research Projects

- Glycolipid transfer protein, GLTP interaction with VAP-proteins in the ER exit sites
- The role of GLTP in demyelination
- Intracellular localization of GLTP
- Inhibitors for glycolipid binding proteins

Special Methodologies & Techniques

- Lipid biochemistry
- Quantitative and qualitative glycosphingo- and phospholipid analysis by high-performance TLC
- Cell and molecular biology
- Fluorescence spectroscopy, steady-state and lifetime
- Radioisotope labeling and lipid metabolism techniques

Major Funding & International Networks

- Medicinska understödsföreningen Liv och hälsa
- Borgs stiftelse
- COST action SPHINX member

Selected Publications

- Glycolipid transfer protein knockout disrupts vesicle trafficking to the plasma membrane. *Journal of Biological Chemistry*. 2023. DOI: [10.1016/j.jbc.2023.104607](https://doi.org/10.1016/j.jbc.2023.104607)

Areas of Expertise

- Post-translational modifications, ubiquitination in particular
- NF-κB signalling pathways
- Apoptotic and non-apoptotic roles of caspases
- *Drosophila melanogaster* as a model system

Research Projects

- Ubiquitination-mediated regulation of inflammation during cell stress and infection
- Targeting ubiquitin signalling in chronic inflammation and inflammation-induced cancer
- Ubiquitin-mediated control of starvation-induced intestinal inflammatory responses
- Caspase-mediated regulation of autophagy in inflammatory signalling
- Modulating caspase activation and immune signalling in intestinal inflammation

Special Methodologies & Techniques

- Analysis of ubiquitin modifications in vitro and in vivo
- *Drosophila melanogaster* as a model system to study cell signalling and immune responses
- Imaging caspase activation in vivo

Major Funding & International Networks

- InFLAMES Flagship
- Sigrid Jusélius Foundation
- Swedish Cultural Foundation
- International Society of Protein Termini

Selected Publications

- M1-linked Ubiquitination by LUBAC Regulates AMPK Signalling and the Response to Energetic Stress. *Cell Death Differ.* 2026. DOI: [10.1038/s41418-026-01675-z](https://doi.org/10.1038/s41418-026-01675-z)

Areas of Expertise

- Our lab investigates the molecular mechanisms underlying brain disorders, with specialized expertise in the signaling pathways regulated by the protein kinases JNK and LRRK2. We have uncovered novel insights into how these kinases influence anxiety-like behaviors and neuronal death in Parkinson's disease. By integrating animal and cellular models with clinical proteomics, we aim to deepen our understanding of the biology behind these conditions.

Research Projects

- We focus on Parkinson's disease, using deep proteomic profiling of blood cells to detect pre-symptomatic changes. This includes developing new informatics to decode the "dark proteome" of cohorts like PPMI to identify early biomarkers. We also study depression cohorts to find markers predicting treatment response. Together, this work offers insight into immune cell roles in brain disorders.

Special Methodologies & Techniques

- Our lab combines fluorescence imaging and proteomics methods with neurobiology, biochemistry, and data science to reach our goals.

Major Funding & International Networks

- These projects are funded by the Michael J Fox Foundation, the Research Council of Finland, EU ERANET, Immudocs, and Inflames. We participate in international networks in the field of neuroscience, including informatics for neuroscience.

Selected Publications

- PhosPiR: an automated phosphoproteomic pipeline in R. Briefings in Bioinformatics. 2022. DOI: [10.1093/bib/bbab510](https://doi.org/10.1093/bib/bbab510)

University: Åbo Akademi University

Lab Website: toivola-lab.org

AboCRIS Profile: research.abo.fi/sv/persons/diana-toivola

Online version

Areas of Expertise

- Epithelial cell biology of gastrointestinal organs and related glands including the endocrine pancreas
- Cytoskeletal intermediate filaments protein regulation and function and molecular roles in health and disease, especially simple epithelial keratins and nuclear lamins
- Auto-immune diseases, Inflammatory bowel diseases, type I diabetes, and colorectal cancer
- Mouse disease modelling
- Non-invasive diagnostics development of intestinal diseases

Research Projects

- Dysregulation of keratins in intestinal inflammation with biomarker potential
- Noninvasive in vitro assays to detect and monitor inflammatory bowel diseases
- A colon-specific mouse model for colorectal cancer
- Keratins as tumor suppressors and guardians of intestinal health
- Beta-cell cytoskeletal keratin 18 and its putative type 1 diabetes-associated variant in beta-cell function

Special Methodologies & Techniques

- Mouse disease modelling, especially models of colitis, colorectal cancer and diabetes
- Intestinal crypt isolation and organoid culture (mini-gut)
- Isolation of islets of Langerhans and 3D culture
- Beta-cell and colon cancer cell lines
- Microscopy, digital histopathology and fluorescence-based imaging methods
- Cell, molecular, biochemical methods
- Immunoassay and non-invasive imaging methods development

Major Funding & International Networks

- Current funding: InFLAMES flagship, Business Finland, Novo Nordisk Fonden, Medicinska understödsföreningen Liv och Hälsa, Diabetes Research Foundation Finland
- Networks: Intermediate filament community, American Society for Cell Biology, Gut Research Community in Finland, Gastroenterology organizations in Finland, and USA

Selected Publications

- Defining a timeline of colon pathologies after keratin 8 loss: rapid crypt elongation and diarrhea are followed by epithelial erosion and cell exfoliation. *Am. J. Physiol., Gastro. Liver Physiol.* 2024. DOI: [10.1152/ajpgi.00140.2023](https://doi.org/10.1152/ajpgi.00140.2023)
- β -cell keratin 8 maintains islet mechanical integrity, mitochondrial ultrastructure and β -cell glucose transporter 2 plasma membrane targeting. 2024. *Am. J. Physiol.-Cell Physiol.* DOI: [10.1152/ajpcell.00123.2024](https://doi.org/10.1152/ajpcell.00123.2024)
- Colonocyte keratins stabilize mitochondria and contribute to mitochondrial energy metabolism. 2024. *Am. J. Physiol.-Gastrointestinal Liver Physiol.* DOI: [10.1152/ajpgi.00220.2023](https://doi.org/10.1152/ajpgi.00220.2023)
- Colonocyte keratin 7 is expressed de novo in inflammatory bowel diseases and associated with pathological changes and drug-resistance. *Sci. Rep.* 2022. DOI: [10.1038/s41598-022-26603-2](https://doi.org/10.1038/s41598-022-26603-2)
- Targeted deletion of keratin 8 in intestinal epithelial cells disrupts tissue integrity and predisposes to tumorigenesis in the colon. *Cell. Mol. Life. Sci.* 2022. DOI: [10.1007/s00018-021-04081-5](https://doi.org/10.1007/s00018-021-04081-5)

Areas of Expertise

- Climate change impacts on marine systems; environmental variability & extreme climatic events, heatwaves, climate change refugia, thermal microclimates
- Area: Ecophysiology, thermal ecology, acclimation & adaptation, species interactions e.g., facilitation, mesocosm food webs, invasion ecology, macrophyte-grazer interactions
- Systems: Bivalves, macrophytes (seagrass, Fucus), associated epi- and infauna, crustaceans (Gammarus, Idotea, mudcrabs), phytoplankton

Research Projects

- PhD S. Rühmkorff: Resilience of Seagrass Ecosystems through Habitat Heterogeneity & Genetic Diversity
- ÅA Stiftelse: SOS - Centre for Sustainable Ocean Science
- Horizon: SEA-Quester - Blue Carbon production, export, & sequestration in emerging polar ecosystems
- Res. Council Norway: NORSE - Biodiversity in Northern European Seagrass meadows – drivers, responses, & resilience
- PhD L. Kraufvelin: Impacts of Heatwaves on the Functioning of Temperate Coastal Ecosystems

Special Methodologies & Techniques

- Combine ecophysiology, acclimation, and adaptation experimental studies with simplified community assessments in mostly experimental approaches
- Using high-throughput incubation units and mesocosms
- Simulating multiple and fluctuating climate change drivers
- High-resolution coastal environmental monitoring

Major Funding & International Networks

- Funders: EU, Research Council Fi, Svenska Kulturfonden, Stiftelse Åbo Akademi, City of Turku
- Collaborations: Tvärminne Zoological Station at Helsinki University, Turku, University of Applied Sciences – TUAS, Tjärnö Marine Laboratory at Gothenburg University, GEOMAR – Helmholtz Centre for Ocean Research Kiel, Alfred Wegener Institute for polar and marine research (AWI) – Wadden Sea Station Sylt, Leibniz Institute for Baltic Sea Research Warnemünde – IOW

Selected Publications

- Small-scale thermal habitat variability may not determine seagrass resilience to climate change. *Limnology and Oceanography*. 2025. DOI: [10.1002/lno.70049](https://doi.org/10.1002/lno.70049)
- The interplay of co-occurring ecosystem engineers shapes the structure of benthic communities – a mesocosm experiment. *Frontiers in Marine Science*. 2024. DOI: [10.3389/fmars.2024.1304442](https://doi.org/10.3389/fmars.2024.1304442)
- Marine heatwaves and upwelling shape stress responses in a keystone predator. *Proceedings of the Royal Society Biological Sciences*. 2023. DOI: [10.1098/rspb.2022.2262](https://doi.org/10.1098/rspb.2022.2262)
- Environmental variability in aquatic ecosystems: avenues for future multifactorial experiments. *Limnology and Oceanography – Letters*. 2023. DOI: [10.1002/lol2.10286](https://doi.org/10.1002/lol2.10286)
- Editorial: Influence of environmental variability on climate change impacts in marine ecosystems. *Frontiers in Marine Science*. 2022. DOI: [10.3389/fmars.2022.994756](https://doi.org/10.3389/fmars.2022.994756)

Areas of Expertise

- Marine biodiversity and marine inventories
- Spatial ecology and conservation planning
- Marine restoration
- Sediment-biological interactions
- Genetic (molecular markers)
- Macroalgal-invertebrate interactions
- Marine indicator development

Research Projects

- Biodiversea-project, funded by EU LIFE IP
- Center for Sustainable Ocean Sciences (SOS), Center of Excellence, funded through ÅAU Endowment
- RIKI- project ("Nutrient turnover in the Archipelago Sea") in cooperation with the ELY Center, funded by the Ministry of the Environment
- The Finnish Inventory Programme for Underwater Marine Diversity, VELMU

Special Methodologies & Techniques

- Marine mapping methods, including UW video camera and photography
- Aquarium experiments
- Sediment analysis
- Molecular markers of selected species (charophytes, blue mussels)
- Spatial modeling

Major Funding & International Networks

- The present funding comes through EU Life, ÅAU endowment, and the Ministry of Environment/ELY-center. Recent funding: Baltic Sea Conservation Foundation, Government of Åland, European Maritime and Fisheries Fund, and the Ministry of Environment

Selected Publications

- Sediment Characteristics in Stonewort *Chara tomentosa* Assemblages. Ecology and Evolution. 2026. DOI: [10.1002/ece3.72772](https://doi.org/10.1002/ece3.72772)

- Social evolution

Research Projects

- Ongoing project: Hormonal and genetic adaptations to a changing environment: a longitudinal population study of eiders (funding: Swedish Cultural Foundation in Finland)

Special Methodologies & Techniques

- Stress physiology: radioimmunoassay of corticosterone and other hormones (prolactin, thyroid hormones)
- Genetics: reduced-representation sequencing (RAD-seq)
- Movement: geolocator tracking
- Morphology and tagging: field measures and colour rings for individual identification

Major Funding & International Networks

- Academy of Finland, project 128039; 2009-2012.
- Swedish Cultural Foundation, 12 grants (2013-2024).
- Maj and Tor Nessling Foundation; 2009-2011.
- ARONIA 10-Year Jubilee Funds (2010).
- Academy of Finland project 104582; 2004-2007.
- Academy of Finland project 51895; 2001-2003.
- Delta Waterfowl Foundation (USA), 2004-2007.
- Oskar Öflunds stiftelse, 2006-2008.
- Ella och Georg Ehrnrooths stiftelse, 2001.

Areas of Expertise

- Nanomedicine
- Biomedical Engineering
- Drug Delivery
- Gene Therapy

Research Projects

- Functional Materials have played a more and more critical role in developing novel treatment methods for different diseases. Our group focuses on designing all kinds of functional materials, at different scales, to solve clinical and biological problems.

Special Methodologies & Techniques

- We have broad collaborations with hospitals, and most of our projects have clinical doctors involved, and initially, from a real-life clinical question. Our group is multidisciplinary, which involves an interplay between physics, materials science, synthetic organic chemistry, engineering, biology, and medicine. We aim that many of our designs could be clinically applicable in the future, and have a tremendous social impact in treating diseases.

Major Funding & International Networks

- I am coordinating many projects from the Research Council of Finland, Business Finland, and different foundations. I am also part of many consortium projects, including the InFlame flagship, NAP4DIVE (EU Horizon), Nordic POP, NordicPharmTrain, PII: Printed Intelligence Infrastructure, MADNESS (ÅAU Center of Excellence). As well as the collaboration project with companies, e.g., the joint project with Bayer Oy. I collaborate broadly with Harvard University, USA, and Chinese hospitals.

Selected Publications

- High-sensitivity, protein-independent detection of dsDNA sequences. *Proc. Natl. Acad. Sci. U.S.A.* 2026. DOI: [10.1073/pnas.2515765123](https://doi.org/10.1073/pnas.2515765123)

Areas of Expertise

- My research focuses on harnessing the benign properties of bio-enabled plant biopolymers to design sustainable and functional biomaterials for better interfacing with living cells or microbes. To create effective bionanomaterials and soft matter biomaterials, my research applies core methodologies such as biopolymer chemical modifications, nanostructured biopolymer synthesis, and self-assembled biocolloidal networks from nano- to macro-scale.

Research Projects

- MADNESS CoE-Center of Excellence in Materials-driven solutions for combating antimicrobial resistance, Åbo Akademi University Foundation, 01.01.2024–31.12.2028 (Co-PI; Center director: Prof. Jessica Rosenholm)
- SusCellInk-Sustainable nanocellulose-based bioinks towards diverse material functionalities and therapeutic delivery of bioactive cues, Research Council of Finland (333158), 01.09.2020–31.08.2025, (PI)

Special Methodologies & Techniques

- Chemical synthesis of nanostructured polysaccharides and polyphenols
- Rheology
- Various additive manufacturing techniques
- Cell-laden 3D bioprinting for fabrication of in vitro models

Major Funding & International Networks

- Independent PI at CoE-MADNESS, Åbo Akademi University Foundation, 01.01.2024–31.12.2028
- Academy Research Fellow, Research Council of Finland (333158), 01.09.2020–31.08.2025

Selected Publications

- Photocurable cellulose nanofibers and their copolymers with polyacrylamide as microgels to support 3D cell cultivation. *Nanoscale*. 2025, DOI: [10.1039/D5NR00583C](https://doi.org/10.1039/D5NR00583C)
- Bioprinting Macroporous Hydrogel with Aqueous Two-Phase Emulsion-Based Bioink: In Vitro Mineralization and Differentiation Empowered by Phosphorylated Cellulose Nanofibrils. *Adv. Funct. Mater.* 2024. DOI: [10.1002/adfm.202400431](https://doi.org/10.1002/adfm.202400431)
